

This exercise and solutions manual accompanies *Foundations of Modern Macroeconomics, Second Edition*. The main text deals with all the major topics, summarizes the important approaches, and gives students a coherent angle on all aspects of macroeconomic thought over the last fifty years.

Each chapter of the manual contains a short question and answer section followed by longer intermediate and advanced exercises. Hints and tips as well as full solutions are provided, making this an invaluable aid to the main text.

By carefully working through this manual, the interested student will develop an ability to derive conclusions regarding macroeconomic phenomena by solving particular macroeconomic models designed to describe these phenomena. By 'playing' with many different types of macroeconomic models, the diligent reader will ultimately develop the skills needed to build his or her own models.

**Ben J. Heijdra** is a Professor of Economics at the University of Groningen, the Netherlands. He is also a Visiting Research Professor at the Institute for Advanced Studies in Vienna, Austria.

**Laurie S. M. Reijnders** is a final-year bachelor student in both Economics and Econometrics at the University of Groningen, the Netherlands.

**Ward E. Romp** is a postdoctoral researcher at the University of Amsterdam, the Netherlands.
